## The Lightning Network Channel Provider

### How do I get started with the Bitcoin lightning network?

For Android mobile users, this is easy; Eclair has a useful app, we are not affiliated with Eclair and have not worked on the development of their app. Eclair is a third-party app, so please do your research before adding large sums of money.

Google Play: <http://bit.ly/LightningMobile>

#### Step One.

Download the official Eclair mobile wallet app. Follow their instructions, and you'll be able to add Bitcoin and join the Bitcoin lightning network.

#### Step Two.

Add Bitcoin to the app using the specified address.

#### Step Three.

Click on the “Channels” button; this is located just below your BTC balances (on the right-hand side).

#### Step Four.

Click on the “+” sign.

#### Step Five.

Click on the “Scan a Node URI” option.

#### Step Six.

Scan the QR code to your left with your phone.

Check the “Use all available funds” box.

The opening speed defaults to “FAST”. The other options available are Slow and Medium. We usually use SLOW to reduce channel fees.

Click on the “OPEN” button and wait. If this has been successful, it should read “waiting to fund” and then a few minutes later, it should read “Normal”.

Once “Normal” appears, that's it, you're connected to the network.
